

SOUNDPRINT

Find your quiet place

What is SoundPrint?

The SoundPrint app was created to identify restaurants, bars and cafes where noise does not interfere with conversation.

Users find noise ratings of venues that have been crowdsourced nationwide. The ratings produce SoundPrint's proprietary, curated "Quiet Lists" of venues that consistently measure "Quiet" or "Moderate." The Quiet List is available at www.soundprint.co.

SoundPrint benefits anyone who prefers socializing in quieter venues, as well as those with hearing loss or other sensory disorders. Research shows that most people with normal hearing prefer quieter places and don't return to a place that is too noisy.

When was SoundPrint launched?

Since April 2018 thousands of submissions and venues have been measured nationwide.

About the founder

Founder Greg Scott, who has hearing loss, struggled to find quieter places where he could have a conversation. He created SoundPrint after finding noise ratings in restaurant reviews to be subjectively measured and unreliable.

Mission

- To be a platform where users help each other discover quieter or noisier venues by measuring and submitting noise ratings
- To educate the public about hearing health and noise pollution
- To educate venue owners on how to optimize the noise level to create a more pleasant atmosphere for patrons and protect hearing health for patrons and employees

How to use SoundPrint

To measure and submit noise ratings:

- When at a venue, open the app and press SoundCheck
- Press Start and measure for at least 15 seconds
- Press Stop/Submit, tag the venue, and then press Submit

To find quieter venues:

- On Search tab, tap "LIST" in upper right corner and app geolocates to find nearby venues, rated from Quiet to Loud

Note: Black pins on map or list are venues that haven't yet been SoundPrinted
